

## 2020/2021 UQ Summer Research Project

<b>Project title:</b>	Herbal medicine use for upper respiratory tract infection: survey data analysis
<b>Number of positions available:</b>	1
<b>Location</b>	PACE/WFH mixture
<b>Project duration:</b>	Between 6 to 10 weeks, flexible depending on student preference.
<b>Preferred start date</b>	Flexible depending on student preference.
<b>Description:</b>	A survey of herbal medicine use is currently open for responses ( <a href="https://survey.app.uq.edu.au/otc-herbals-for-urti.aspx">https://survey.app.uq.edu.au/otc-herbals-for-urti.aspx</a> ). This project will be to analyse the survey data, conduct a short literature review, and prepare a publication. There are both numerical and written responses in the survey to analyse. We hope that you will work with a summer scholar at the University of Sydney, and under the direction of an academic at UQ and USyd, so that together you will analyse the data and present it in a format suitable for publication.
<b>Expected outcomes and deliverables:</b>	The scholar will gain skills in data analysis and have an opportunity to prepare a publication.
<b>Suitable for:</b>	This project is open to students who have good writing skills, numeracy skills and are familiar with Excel. Experience in the use of a statistical program to conduct tests such as Chi-square, ANOVA, etc. would be beneficial but not essential.
<b>Primary Supervisor:</b>	Assoc. Prof Kathryn Steadman
