

2020/2021 UQ Summer Research Project

Project title:	Herbal medicine clinical trials
Number of positions available:	1
Location	Evidence Sciences, New Farm.
Project duration:	Between 6 to 10 weeks, flexible depending on student preference
Preferred start date	Flexible depending on student preference
Description:	A number of clinical trials for herbal medicines are in progress, and you will help two UQ PhD students with the data collection and analysis of those. This may include making phone calls to participants, data entry, data checking, and data analysis. Training will be provided for any tasks you are asked to help with. See evidencesciences.com.au for information on the organisation you will be spending time with.
Expected outcomes and deliverables:	The student will gain experience of working with a clinical research organisation on clinical trials.
Suitable for:	<p>This project is open to students who have an interest in complementary medicines, good communication skills, attention to detail, numeracy skills and are familiar with Excel.</p> <p>Experience in the use of a statistical program (e.g. SPSS) to conduct tests such as Chi-square, ANOVA, etc. and knowledge of Good Clinical Practice would be beneficial but not essential.</p>
Primary Supervisor:	Assoc Prof Kathryn Steadman
